## react-native-sensors-analytics JS层简析

源码: react-native-sensors-analytics

对于JS层源码修改的入口文件为SensorsDataRNHook.js --- 最后的switch语句根据命令行参数执行不同的函数

- 1. 先reset再埋点
- onPress --- 直接或间接继承自Touchable.js --- this.touchableHandlePress --- 调用NativeModule 的trackViewClick 方法处理、上报事件
- 3. View等可点击元素 --- ReactNativeRenderer.js创建和渲染原生View --- 将组件的ViewID和props传入Natvie层等待打点
- 4. Slider滑动事件 --- Slider.js --- onSlidingComplete(event.nativeEvent.value); --- 1
- 5. Switch选择器 --- Switch.js --- 注意代码插入位置
- 6. SegmentedControl(IOS) --- SegmentedControlIOS.ios.js --this.props.onValueChange(event.nativeEvent.value);
- 7. GestureButtons --- /react-native-gesture-handler/GestureButtons.js --this.props.onPress(active);
